**EH3500AC-3**

**NOMINAL PAYLOAD:** 181 tonnes (200 tons)

**OPERATING WEIGHT:** 322,000 kg (709,888 lb.)

**RATED POWER:** 1491 kW (2,000 hp)
At Hitachi, we don’t get sidetracked building every kind of mining equipment. Instead, we build trucks and excavators. And that focus results in highly efficient, durable and reliable trucks with powerful performance.

What happens when you combine our time-proven truck technology with our newest and most efficient Advanced IGBT AC-Drive system? You get the EH3500AC-3, one of the most technologically advanced mining trucks in the world. It helps raise profits by lowering fuel and maintenance costs. With the EH3500AC-3, you have...

**Hitachi AC Technology.** Hitachi has been at the forefront of both Gate Turn Off (GTO) and IGBT propulsion technology for over 30 years. Now, the company has channeled this expertise into Hitachi AC-drive trucks.

**Unlike all other competitors, the entire AC-drive system is designed, built and supported by the same company — HITACHI**

The new-generation Hitachi IGBT system outperforms previous and competitive systems through its simplicity, improved efficiency and enhanced dependability. It couples the best GTO features with higher torque, faster acceleration, smoother retardation and lower operating costs.
Economical.
Our new Advanced AC-Drive System makes the EH3500AC-3 a more valuable asset for your mining operations. It delivers better performance, higher uptime and helps significantly reduce maintenance and fuel costs.

Efficient.
The EH3500AC-3 is equipped with a Cummins QSKTA50-CE diesel engine that generates 1491 kW (2,000 hp) at 1,900 rpms and meets Tier 2 EPA emission requirements.

Long frame life.
The frame on the EH3500AC-3 has also been redesigned and improved for longer life. The bolt-on high-arch cross member, combined with new rear axle housing and nose cone designs give the EH3500AC-3 the sturdiest frame of all.

High capacity.
The EH3500AC-3 gives you the ability to handle big hauling jobs. The nominal payload is at a very high level – 181 tonnes (200 tons).
**INNOVATION**

- **Slip/slide control system**
  The enhanced Slip/Slide Control System is an active traction control and anti-lock brake system in slippery conditions. The enhanced performance of the Slip/Slide Control System comes from the utilization of various new sensors on the front wheels, suspension and steering systems.

- **Pitch control system**
  The Pitch control feature of the Advanced AC-Drive System reduces bouncing/rebounding on the truck as it hits bumps or uneven ground on the haul road. As the truck comes to a stop the rebounding or rocking effect due to the change in inertia of the truck is also reduced.

- **Side skid control system**
  The Advanced AC-Drive System also provides a side skid control feature that helps the operator in slippery road conditions when making turns. By utilizing changes in the wheel motor torque from left to right during cornering, it assists the operator in turning the truck and keeping it on the proper track.
THE MOST ADVANCED AC-DRIVE SYSTEM EVER.

EFFICIENT AND INNOVATIVE.

The EH3500AC-3 runs with Hitachi’s newest, state-of-the-art Advanced AC-Drive System using Hitachi’s own IGBT controller, alternator and wheel motors. Hitachi has been in the electrical drive system business for years – first with GTO, now with IGBT. In fact, the technology has successfully been used on bullet trains, locomotives, monorails and commuter electric cars around the world. The result is an AC-powered truck that outperforms other systems through its simplicity, efficiency and dependability.

Hitachi is the only truck manufacturer in the world that builds its own AC-drive systems. So the new Advanced AC-Drive System is perfectly matched to the EH3500AC-3. It delivers higher torque, faster acceleration, smoother retardation and lower operating costs. With the Hitachi Advanced AC-Drive System, you get...

POWERFUL TECHNOLOGY.

- **Auto cruise control** keeps vehicle speed constant within the set range by limiting the minimum vehicle speed.
- **Superior electric braking** enables the driver to stop the truck using the electric brake pedal only with the exception of emergencies, because the AC-drive control system applies the service brakes automatically just before the stopping, resulting in easy machine operation and longer time between service brake maintenance intervals.
- **Auto retarding control** keeps vehicle downhill speed constant within the set range by limiting the maximum vehicle speed.
- **IGBT modules** (inverter and chopper) are liquid cooled. Grid resistors, alternator and traction motors are forced-air cooled. The final drive gear oil is circulated, air-cooled and filtered before being directed back to the final drive.
- **AC-drive wheel motor** The Hitachi Double Path Tandem Planetary Design provides high efficiency. Better component and lubricant life is the result of holding the 1st carrier stationary and constantly cycling the lubricant through a cooler and filter.
Hitachi trucks have earned a reputation for durable and dependable performance at mining operations across the world. The EH3500AC-3 is no exception and tackles your toughest jobs with its redesigned frame. Its unique trailing-arm suspension minimizes frame stress and fatigue, while providing lower tire wear and better steering. This rugged system is easy to service and maintain. You get access to the strut without removal of the wheel, which reduces your downtime and repair costs. With the EH3500AC-3, you get...

**MORE WORK DONE.**

- The updated body is stiffer and tougher with a six percent steeper floor pitch to reduce spillage and provide solid, well cushioned body-to-frame support. The hoist system is auto-programmed to stop before stroke end to reduce shock.
- The redesigned frame also features a bolt-on, high-arch cross member, combined with a new rear axle housing and nose cone design that together deliver higher strength and durability.
- The new frame has fully fabricated box-section rails with section height tapered from rear to front. The one-piece top and bottom flanges eliminate cross member tie-in joints. The large radii at frame junctions minimize stress, and all welds are longitudinal to reduce stress cracks and deliver more strength and durability.

**OUTPERFORM. OUTLAST.**

- Our new cab structure provides improved safety and durability. The cab frame is stronger and features a three-point isolation-mount design to allow additional independent motion from the truck frame.
- Trailing-arm Suspension (Front)
- Neocon strut (Front/Rear)
- Helium gas
- Neocon-E fluid
- Impact
**Spindle**
Each spindle is controlled by a hydraulic steering cylinder, which rotates around the king-pin and the outer end of the trailing arm to position the wheels for steering. The spindles are attached by one tie-rod.

**King-pin**
Retains the spindle to the trailing arm. Spindle rotates around the king-pin, which is locked in position. The Neocon-E™ strut attaches to the top.

**Trailing Arm**
Main suspension member to which other suspension components are attached. The trailing arms hinge on a torque tube that is clamped to the front of the frame.

**Neocon Strut**
The energy absorption and release component of the ACCU-TRAC suspension system. Pinned to ball bushings at the frame and at the top of the king-pin to prevent bending movements from transferring to the strut. Receives only axial input.

*SAE, PCSA heaped capacity*
MORE UPTIME, BETTER BOTTOM LINE.

With the EH3500AC-3, you’ll get more uptime and more jobs done. It’s engineered to deliver the highest productivity possible – from a cab designed for operator comfort to large load capacities and an advanced monitoring system. Our years of experience building mining trucks gives us the knowledge to build in a series of innovative, functional features that result in more efficient hauling. Choose the EH3500AC-3, and you can...

HIGHER PRODUCTIVITY.

With the EH3500AC-3, you’ll get more uptime and more jobs done. It’s engineered to deliver the highest productivity possible – from a cab designed for operator comfort to large load capacities and an advanced monitoring system. Our years of experience building mining trucks gives us the knowledge to build in a series of innovative, functional features that result in more efficient hauling. Choose the EH3500AC-3, and you can...

- The IGBT Advanced AC-Drive System provides faster torque curve for greater acceleration, higher speeds under load and retardation to nearly 0 mph.
- The improved hydraulic hoist system delivers faster raises and lowers. Hoist raise calibration system can be programmed to cut out the cylinder extension prior to reaching full extension. It also controls the body-lowering speed to ensure maximum cylinder life.
- High availability results from a strong frame, long-lasting suspension, cooled and lubricated AC-drive system and excellent engine options.
- The EH3500AC-3 is built with an improved payload monitoring system with enhancements to handle rugged loading conditions better. It is fully integrated to the truck’s monitoring system (and therefore your Mine Fleet Management System*) for prompt reporting of tons moved, cycle times, cycle count and distance.

*Requires optional equipment.
MAXIMUM COMFORT FOR MORE PRODUCTIVITY.

More comfortable operators are more productive. The EH3500AC-3 cab maximizes comfort with spacious room, adjustable seating, wide-area visibility, plus a quiet, low vibration interior. This cab helps operators feel less stressed and tired, which makes them capable of handling more work. In addition, the unobstructed visibility gives operators confidence and keeps them safe. With the EH3500AC-3, you get a...

EFFICIENT WORK ENVIRONMENT.

- Visibility from the cab is enhanced with added mirrors, cameras for blind spots, backup and tire lights and brighter headlamps. Included as standard safety equipment is an analog monitor mounted to the dashboard to display live camera information.
- The high-efficiency dashboard puts controls within easy reach and good visual contact. A full complement of easy-to-read gauges, a spacious environment, six-way adjustable operator’s air seat, tilt/telescopic steering wheel and filtered adjustable air vents contribute to operator comfort.
- The EH3500AC-3 features a new, easy-access diagonal ladder that provides a safe, quick way to get in and out of the cab.
- The new, wider cab also has a double full-size seat available that provides plenty of space for a trainer to work with an operator.
- Double-wall construction of inner and outer steel panels produces a more structurally sound cab. A three-point rubber isolation-mount design allows greater independent motion from the truck frame, which significantly reduces shocks, vibrations and noise, and keeps operators more comfortable.

COMFORTABLE AND SAFE CAB.
The new HI-TECH ROPS/FOPS cabs are equipped with a Hitachi controller and a large, centrally mounted color Liquid Crystal Display (LCD) as used in our large size excavators. The display makes operation simple and easy.

COMFORT

- Heating/cooling capacities have been increased to keep operators comfortable and productive in all types of weather.
LESS MAINTENANCE.
MORE UPTIME.

With our mining industry experience, we understand the biggest challenges in service and maintenance. So we’ve engineered the EH3500AC-3 with the most convenient and efficient service and maintenance solutions available. You’ll spend less time working on the truck and more time working on jobs. Choose the EH3500AC-3 and get...

SIMPLE SERVICING.

- The AC-drive system has multiple controls that ensure trouble-free reliability and less maintenance. They include grid dry motor control that keeps the grid system dry in cold or wet conditions. A blower control cools the alternator and wheel motors in hot conditions.
- Hitachi trucks feature a fast-fill system station. This station, located on the left side of the radiator, gives you direct access at ground level for fast filling/topping off of lubricants, grease, hydraulic oil and engine oil. Our auto-lube system provides consistent lubrication to required areas on the truck reducing maintenance downtime. (Couplers are optional.)
- Four, low maintenance air filters with evacuator valves bring easy and safe maintenance.
- The collapsible step and flat service stage inside the rear axle brings higher serviceability and safety.

MORE UPTIME AND CONVENIENT MAINTENANCE.
The well laid out design of the water-cooled, high-speed IGBT controls requires less space on the truck. Individual grid resistors provide easier maintenance and improved cooling.

Simple sight glasses on the fuel and hydraulic fluid systems allow for a quick pre-shift confirmation that the levels are not below minimums.

The trailing-arm suspension allows the front struts to be removed and installed without removing the front brakes or tires. This means fewer tools and less labor time are required, resulting in less downtime and higher productivity.

Our service tool allows downloads of a wide variety of information to your technicians' laptops for quicker diagnosis of performance issues.

The new system monitor gives you the ability to see information and diagnostics of all onboard systems and controls, helping you reduce downtime with faster and more reliable troubleshooting and analysis.
Mechanics and service technicians at your Hitachi dealer are highly trained and skilled, and know how to quickly service your equipment and solve any problems. They get you back up to speed quickly and efficiently.

To help ensure your trucks stay up and running, we provide parts backup both at our factories and strategic parts depots, so you’ll have rapid access to any parts you need.

Hitachi factory support managers are assigned to specific mines and provide oversight to help ensure performance.
FOCUSED ON YOU, NO DISTRACTIONS.

SUPPORTING YOUR BOTTOM LINE.

It can be frustrating when you need service or parts – especially when you can’t get them quickly because the manufacturer is distracted dealing with all kinds of other equipment customers.

At Hitachi, we concentrate on excavators and trucks. So you can count on us to respond rapidly. You’ll get the parts you need, the service you want and the customer support you deserve. We stand behind you with a strong dealer network; a skilled factory support team; trained mechanics; and one of the best, most comprehensive warranty and maintenance programs available. Because we’re focused on you, you get...

WHAT YOU NEED, WHEN YOU NEED IT.

Remote Machine Management with Global e-Service.
This online machine management system allows you to access each on-site machine from a PC in your office. You can get its operating information and location to increase productivity. Operating data and log are sent to a Hitachi server for processing, and then to customer and dealers. This system is available 24/7/365.

Note: In some regions, the Satellite Communication Device is not available by local regulations; the GPRS (mobile) communication device is an option for these regions.

* DTU (Data Transfer Unit) (optional) is required for connection to fleet management systems.
** WIU (Wireless Interface Unit) transmits operating data via wireless connection for downloading data.
**EH Series AC-Drive Mining Trucks**

**EH3500AC-3**

Tire manufacturers offer tires having a range of capabilities suitable for a variety of applications. For high performance hauling it is important to consult with the tire manufacturer to choose a tire that is best matched to your truck TGMOW, travel speed and customer specific jobsite conditions. Jobsite condition severity, may result in a reduced truck payload and travel speed recommendation.

Hydraulic System

Two (2) Hitachi three-stage, double-acting cylinders, with electronic controlled cushioning in retraction and extension, containing dual rod seals and urethane energized scrapers, inverted and outboard mounted. A tandem piston pump combines with four position electronic pilot controlled hoist valve. The electrical controller is mounted to the shift tower.

Electrical System

24-volt system. 140 ampere engine driven or Cummins engine driven alternator. Four 245HS2, 12-volt, heavy duty batteries connected in series/parallel.

Steering System

Closed-center, full-time hydrostatic power steering system using two double-acting cylinders and a variable displacement piston pump. Hitachi accumulators provide supplementary steering in accordance with ISO 5010 (SAE J1161), supplying a constant steering rate under all conditions. A tilt/telescopic steering wheel with 35 degrees of tilt and 57 mm (2.2 in.) telescopic travel is standard.

Service Capacities

Crankcase (includes filters): Cummins 200 L (52.8 gal.)
Crankcase (includes filters): MTU 190 L (50.2 gal.)
Engine Cooling System: Cummins 531 L (140.3 gal.)
Engine Cooling System: MTU 543 L (143.4 gal.)
Fuel Tank (Standard) 2040 L (538.9 gal.)
Fuel Tank (Optional) 3690 L (974.8 gal.)
Hydraulic System 750 L (198.1 gal.)
Planetary Drives (L&R) 218 L (57.6 gal.)
Front Wheels (L&R) 17 L (4.5 gal.)
Control Cabinet cooling system 30 L (7.9 gal.)
Main Accumulator 70 L (18.5 gal.)
Windshield Washer 20 L (5.2 gal.)

Body Capacities

Struck (SAE) 80.4 m³ (105.2 cu. yd.)
Heap 3:1 105 m³ (137.3 cu. yd.)
Heap 2:1 (SAE) 117 m³ (153 cu. yd.)

Body capacity and payload subject to change based on customer-specific material density and application.

EH3500AC-3

Brake System
Brake system complies with ISO 3450 (SAE J1473).

Service Brake
Service braking for the EH3500AC-3 is made up of front and rear hydraulically applied brakes and the electric brake.

Front Axle - Dry Disc
Disc Diameter Each (2 discs/axle, 3 calipers/disc) 121.7 cm (4 ft.)

Rear Axle - Dry Disc
Disc Diameter Each (2 discs/axle, 3 calipers/disc) 109 cm (3 ft. 7 in.)

Secondary
Two of front hydraulic, rear hydraulic and electric brake within the service brake system provide modulated reserve braking capability. Both front and rear hydraulic brakes are automatically applied when loss of pressure is detected.

Parking Brake
This system is designed to use spring-applied, hydraulically released brake calipers to hold the truck stationary.

Electric Brake
The Electric Brake is used for usual operating brake for the EH3500AC-3. The Hitachi AC-Drive system provides all necessary truck speed control, including speed reduction to 0 km/h travel speed when the electric brake pedal is depressed. Also, the rear service brakes automatically apply at speeds below 0.5 km/h if this pedal is depressed.

Maximum dynamic braking (Standard) 2000 kW (3,755 hp)

Load/Dump Brake Apply
Through activation of a switch by the operator, a solenoid is energized, sending full brake pressure to apply the rear dry disc brakes. For use during the load and dump cycles.

Hi-Tech ROPS/FOPS Cab
ROPS complies with ISO3471 and SAE J1040-May 94, FOPS complies with ISO3449. A three-point rubber ISO-mount arrangement to the high-arch cross member minimizes vibration transfer to the operator compartment. New wider cab with double, full-size seat available and enough trainer’s leg space brings comfortable operating and training.

Monitoring System
A new Hitachi system monitor provides display information and diagnostics of all onboard systems and controls which include the engine and Hitachi AC drive. Data links offer complete integration, while a color Liquid Crystal Display (LCD) clearly details machine functions. Downtime is minimized with faster and more reliable troubleshooting and analysis. A new Hitachi load monitoring system offers benefits such as better equipment utilization on the jobsite, accurate unit and fleet production results, and benchmark unit statistics against fleet results. Cycle time, distance and cycle count can all be measured and recorded as information that can help in developing higher productivity. The Hitachi load monitoring system is fully integrated with the Hitachi vehicle monitoring system and display interface, avoiding potential failure or error common in aftermarket systems.

Camera Monitoring System
Included as standard safety support equipment, an analog monitor has been mounted to the dashboard to display live camera information of the rear and right front area.

Suspension
Front Suspension
Independent trailing arms make up the front axle. NEOCON struts containing energy-absorbing gas and compressible NEOCON-E™ fluid are mounted between the trailing arms and frame. Inherent in the NEOCON strut design is a variable damping and rebound feature.

Rear Suspension
“A” frame structure, integral with axle housing, links the drive axle to the frame at forward center point with pin and spherical bushing. A track rod provides lateral stability between the frame and drive axle. Heavy-duty rear-mounted NEOCON struts containing energy-absorbing gas and compressible NEOCON-E™ fluid suspend the drive axle from the frame. Integral variable damping and rebound feature included.
Body
An extended canopy protects service deck area. High tensile strength 400 BHN abrasion-resistant alloy steel is used in thicknesses indicated below:

<table>
<thead>
<tr>
<th>Part</th>
<th>Thickness</th>
</tr>
</thead>
<tbody>
<tr>
<td>Floor</td>
<td>16 mm (0.63 in.)</td>
</tr>
<tr>
<td>Front</td>
<td>9 mm (0.35 in.)</td>

</tbody>
</table>

Special plate thicknesses and partial plates are available.

Hitachi Bodies

Tough Body Structure
Designed by Hitachi for long-lasting strength and productivity. Hitachi offers customized solutions to match specific load and haul applications. Optional bodies and parts are engineered on request.

Standard Body
The Hitachi standard body is designed to accommodate the needs of popular mid-range material densities and the most popular loading machines. Various options, such as liners, spill guard, extended canopy are available.

Coal Body (Optional)
The Hitachi coal body has been designed for low material density, small fragmented, low abrasive material. This coal body offers excellent material shedding, low empty weight and large capacity.

Iron Ore Body (Optional)
The Hitachi iron ore body has been designed for use in rugged iron ore mining applications. The body has been designed for high density material and optimized loading and dumping.

Customized Body (Optional)
Upon request and approval, Hitachi will design bodies to suit special mining applications.

Frame
Full fabricated box section main rails with section height tapered from rear to front. Narrow at the rear to support the load and wider at the front allowing truck stability and excellent engine access for servicing. One-piece top and bottom flanges that eliminate cross member tie-in joints and provide a large exposed center area for access to major components. Large radii at frame junctions are blended and ground to minimize stress concentrations. Weld joints are oriented longitudinally to the principal flow of stress for greater durability and more strength.

The new “bolt-on” High Arch Design requires less assembling time and no welding. The design provides higher structural quality and better serviceability during engine overhaul.
Hitachi Loading Policy

Operational Benefits

Haulroad Safety

Truck loading within the limitations of the Hitachi Loading Policy will result in designed and certified operational performance of the steering, brake and ROPS systems of the truck.*

Efficient Productivity

Truck loading within the limitations of the Hitachi Loading Policy will result in optimizing the fuel economy and travel speed performance to which the truck was designed to.*

Availability and Maintenance

Lower maintenance costs and higher availability can be achieved if truck loading is within the limitations of the Hitachi Loading Policy.*

*Hitachi recommended maintenance is required.

---

Perimeter Visibility (Standard)

The addition of mirrors and cameras to the base model make the truck compliant to the perimeter viewing requirement of standards ISO 5006 and ISO 14401.

---

1: More than 90% of all loads must fall below 110% area (Orange area).

2: If necessary due to excessive variation in material density, loader bucket fill-factors or bucket sizes, loading the truck to between 110% and 120% of Nominal Payload is allowed if it accounts for less than 10% of all loads (Yellow area).

3: Loading above 120% of Nominal Payload is not allowed. (Red Area)
SkyAngle (Peripheral vision support system)

The SkyAngle feature is available to significantly increase peripheral vision around the dump truck by providing synthesized multiple images captured by cameras specifically positioned at four locations around the truck. The feature displays camera views on a single monitor to allow operators an auxiliary means of checking for ground level obstacles.

Available on neutral or forward only

WIDERANGE VIEW + REAR VIEW

WIDERANGE VIEW

MIDRANGE VIEW

CLOSERANGE VIEW

RIGHT & LEFT SIDE VIEWS

Available on neutral or forward only
### General
- AC-drive system
- Auto cruise control
- Auto retarding control
- Automatic lubrication system (Lincoln)
- Battery isolation switch
- Body prop cable
- Blower fan motor for alternator cooling (1)
- Control cabinet pressurized/liquid cooled/lockable
- Deck-mounted muffler
- Deck-mounted stone guards
- Diagonal front stepway
- Electric-controlled hoist system
- Electric horns (4)
- Emergency ladders (2)
- Engine access ladders (2)
- Engine shutdown switch
- Engine stop warning indicator
- Engine-related warning indicators
- Fan clutch
- Fan and belt guards
- Fast fluid filling system
dcoupler
- Fast fluid filling system coupler
- Final drive lubricant filtration
- Front view mirror, LHS/RHS
- Fuel/Water separator
- Fuel tank, 2040 L (538 gal.)
- Ground level battery box
- Ground level relay box
- IGBT-controlled grid fan motors (4)
- IGBT-controlled grid fan motors (1)
- IGBT-controlled fan motor (1)
- Load weighing system
- Load weight system
- Maximum speed control system according to payload
- NEDOON suspension struts
- Rear view camera
- Rear view mirrors (4)
- Rims, 736.6 mm (29 in.)
- Side view camera (RHS)
- Suction port shut off valve at hydraulic tank
- Supplementary front braking system, accumulator
- Supplementary rear braking system, accumulator
- Supplementary steering system, accumulator
- Tow hooks, front
- Tow hooks, rear
- Wind indicator
- Wind sensor gap
- Windshield wiper
- Windshield wiper}

### Cab
- Air conditioner
- AM/FM radio
- Auxiliary outlet, 12 volt
- Camera monitor
- Engine shutdown switch
- Heater and defroster
- Integrated RDPS/FOPS cab
- LCD system monitor
- Lead and dump brake switch
- Override switch
- Communication system (alternative) *
- Satellite data transmitting system
- Seat with 2-point, 50 mm (1.97 in.) width seat belt
- Full size operator’s seat, air suspension & 6 position
- Regular size trainer’s seat, mechanical & adjustable
- Tinted safety glass, with roll-down windows
- Win (Wireless Interface Unit) *
- I2-volt accessory connection

### Monitor Panel
- AC-drive system maintenance required warning indicator
- Ambient temperature
- Body angle indicator
- Brake/steering hydraulic oil pressure gauge
- Central warning indicator
- Clock
- Coolant temperature gauge
- Drive control status indicator
- Drive-related warning indicators
- Engine oil pressure gauge
- Engine-related warning indicators
- Engine stop warning indicator
- Fuel gauge
- Hour meter
- Hydraulic-related warning indicators
- Indicate HCM code
- Indicate message
- Indicate SAE code
- Light indicators
- Load meter
- Model
- Shift lever position indicator
- SkyAngle (peripheral vision support system)
- Speedometer (with odometer)
- Tachometer
- Turn signal indicator
- Wheel motor temperature gauge

### Machine Lights
- Backup lights (2)
- Clearance lights (4)
- Combination stop and tail lights (2)
- Deck lights (2)
- Diagonal front stepway light
- Engine compartment lights (2)
- HID headlights (8)
- Payload external indicators, 2 locations of 2 lights each
- Rear axle compartment light

### Optional Equipment
- Arm guard
- Auxiliary dump connection
- Auxiliary steer connection
- Body liners (400BHN)
- Body prop pins
- Body sizes **
- Cold weather package **
- Communication system (alternative) *
- GPRS communication system
- Deck guard
- Fast fluid filling system couplers
- Fast fuel filling system coupler
- Fuel tank, 3690 L (974.8 gal.)
- Full size operator’s seat, air suspension & 0 position, with 3-point, 50 mm (1.97 in.) width seat belt
- Full size trainer’s seat, air suspension & 6 position, with 2-point, 50 mm (1.97 in.) width seat belt
- Gridbox guard **
- Halogen front tire lights (2)
- Heated mirrors
- Loadweight displays (2)
- Sound attenuation package **
- Spare rim
- Tire guards (2)
- Trolley assist configuration **

### Optional Equipment Weight
- Body liners (400BHN) plates including floor & corners (12 mm [0.47 in] thicknesses), sides & front and canopy drop edge (6 mm [0.24 in] thicknesses) 6870 kg (15,146 lb.)
- 3690 L (974.8 gal) fuel tank with 100% fuel (additional weight to the standard tank with 100% fuel) 2000 kg (4,409 lb.)
- Loadweight displays (2) 150 kg (331 lb.)
- Arm guard 140 kg (309 lb.)
- Arm guard 100 kg (220 lb.)
- Tire guards (2) 130 kg (287 lb.)

See your Hitachi dealer for further information.

---

*The availability of the system depends on licensing regulations in each country. Please contact Hitachi dealer for more information. **Engineered on request. Note: Regarding the Cummins engine, fuel optimized ratings available to meet worldwide emissions and enhanced fuel efficiency. Contact your nearest authorized Cummins Distributor for details and availability.
